

WEEK – 4

Hands-on 1: Scripting in ServiceNow

1. Understanding client-side and server-side scripting

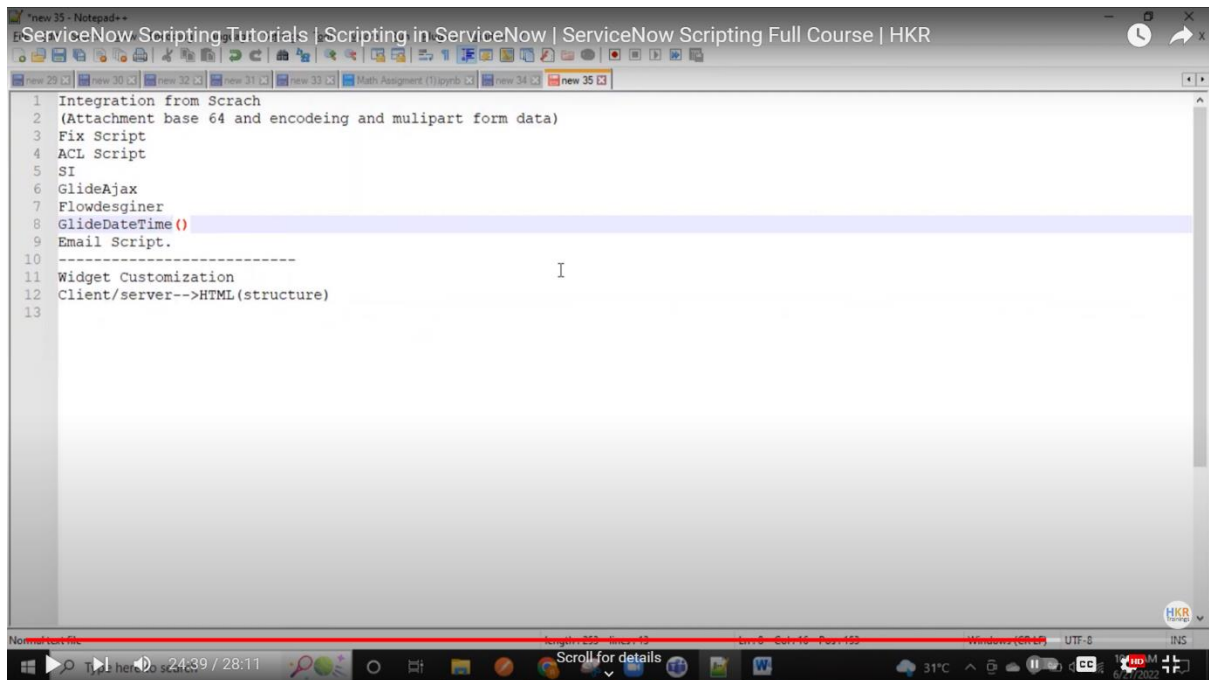

- Client-side and server-side scripting will be useful for integrations and in creating UI policies, ACL scripting, etc
- Client-side scripting runs code on the client, server-side runs on the server.
- Identifying when to use client-side vs. server-side based on where the code needs to run.
- Client-side scripting handles cosmetic changes visible to users.
- Server-side scripting manages data-related operations and business logic.
- Client-side scripting involves coding from basic to advanced for front-end development.
- Server-side scripting in ServiceNow includes script include, business rule, glide record, background script, schedule job script, and more.

2. Introduction to ServiceNow scripting

- ServiceNow scripting includes client-side techniques, advanced sections, import set script transform, glide datetime, email scripts, integrations, and authentication processes like JWT.

- Scripts in data policy or configuration can be included like client-side techniques.
- Integration of authentication processes like JWT and token can be supported by ServiceNow but may require a mid-server installation.
- ServiceNow scripting allows customizing business applications in the platform. It involves using JavaScript to create custom functionalities.

Hands-on 2: What is ServiceNow | ServiceNow Tutorial for Beginners

1. What is ServiceNow

- ServiceNow is a cloud-based platform with dedicated workflows for easy access and development.
- Cloud hosting allows data access and security from anywhere, making ServiceNow accessible from any device.
- ServiceNow is a platform as a service (PaaS) that enables application development and customization without coding.

2. Services of ServiceNow.

- ITSM, HRSD, integrations, asset management, and business management and many more services are offered.

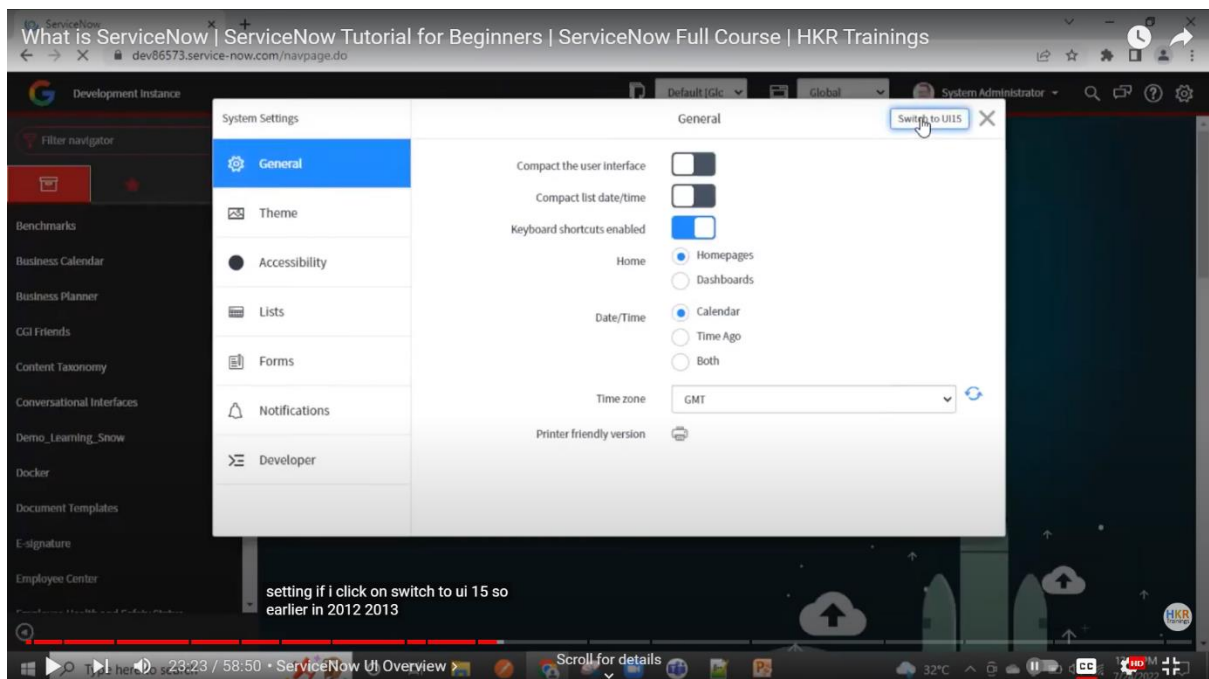

- The GRC and financial operating management modules are utilized in the banking sector.

3. Career & growth in ServiceNow

- ServiceNow has shown exponential career growth since its introduction in the market, surpassing competitors like BMC Remedy tool.
- With ServiceNow, individuals have the potential to earn significantly due to its no-code platform and high demand in the industry.
- ServiceNow certification and training cover fundamental admin and developer courses.

4. ServiceNow UI Overview

- The versions are named after cities in alphabetical order, such as Istanbul, San Diego, Rome, Paris, Cubic, and Tokyo
- There are quarterly results to track ServiceNow's performance and it has been growing exponentially for the past 20 years

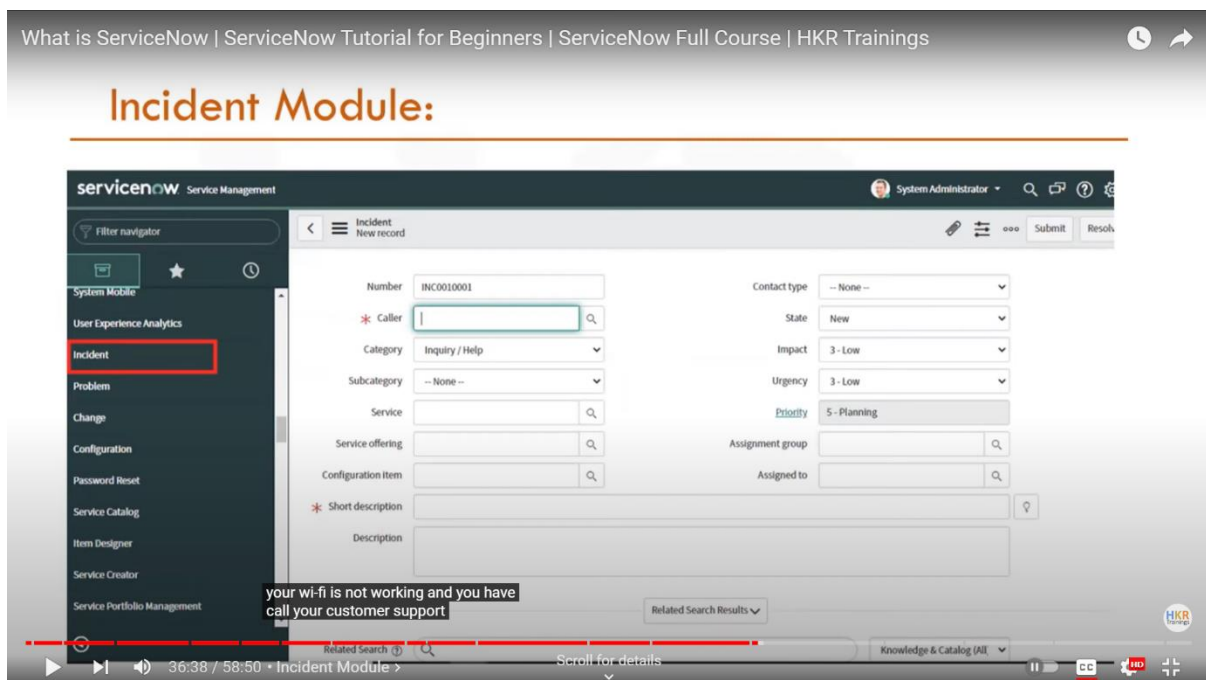

5. ServiceNow Components

- The application picker captures all changes made and is crucial for development.

- The global application is available to all customers, while workspace-specific applications are limited to workspace customers.
- Left side contains instance logo, instance name, and application filter
- Right side includes application picker, update set picker, and user details

6. Incident Module

- Customers report issues to customer care, who then raise a ticket and assign it to a group for resolution.
- Technicians from the group visit the customer, rectify the issue, and solve the problem.
- An incident ticket is created when something impacts your work, like internet issues, and is managed in the incident module.
- If an issue occurs repeatedly and becomes a problem, a problem ticket is created and managed in the problem management module.

7. Problem Module and Change Module

- Problem management involves assessing, identifying root cause, and fixing problems
- Change management includes creating new change requests, getting approvals, and managing different levels of changes

8. Lists and Forms

- Filtering in lists helps in narrowing down the list of items based on category
- Grouping in lists allows to group items by a specific category, controlling the display of records
- Activity stream displays recent user activities and closed incidents with regulation codes
- Personalized list allows users to move items from left to right bucket and perform sorting, filtering, and integration
- ServiceNow forms can have one layout, two layout, or a blend of both
- Applying filters on ServiceNow using the funnel icon and selecting columns like category

The screenshot displays the ServiceNow Incidents list view. A dropdown menu is open for the 'Group By' field, showing options like 'None', 'Active', 'Approval', 'Assigned to', 'Assignment group', 'Business Application', 'Business resolve time', 'Caller', 'Category', 'Caused by Change', 'Change Request', 'Child Incidents', 'Closed by', 'Company', 'Configuration item', 'Contact type', 'Contract', 'Correlation ID', 'Correlation display', 'Created by', 'Delivery plan', and 'Delivery task'. The main table lists incidents with columns: Category, State, Caller, Configuration item, Priority, Short description, Created, Description, and Updated by. The table contains several rows of incident data.
